

Oier Arostegui Llona

## 10. Hacer back up y restaurar el sistema

Desde el menú: Maintenance  $\rightarrow$  Configuration Archive.

Seleccionamos la ruta donde queremos que nos deje el archivo de back up (en nuestro equipo local):

Y pulsamos el botón "Back Up":

Antes de realizar cualquier cambio, más si la máquina está en producción, se recomienda siempre hacer un back up por si acaso no funciona el último cambio y tenemos que volver atrás rápidamente.

Para restaurar la configuración de un back up existente, vamos a la pestaña Restore, seleccionamos que nos muestre todos los archivos de back up existente, seleccionamos el que queramos restaurar y pulsamos sobre el botón "Restore".
